SUMMARY

Data Engineer / Software Developer with 6+ years of experience building AWS-based data pipelines and automation for financial services systems. Skilled in Python, SQL, Spark, Glue, Redshift, S3, and Step Functions, with practical experience using AI coding tools to support debugging, refactoring, and faster development.

TECHNICAL SKILLS

Languages: Python, SQL, Kotlin

AWS: Glue, Redshift, S3, Step Functions, EC2, CloudWatch

Data & Tools: Apache Spark, ETL Pipelines, Git, GitLab, Parquet, Data Modeling

AI Developer Tools: Claude Code, OpenAI Codex, GitHub Copilot

EXPERIENCE

Software Developer | Fannie Mae

Mar 2021 - Present | Chicago, IL (Hybrid)

- Build and maintain data pipelines using Python, SQL, and AWS (Glue, Redshift, S3) for loan calculation and F3 forecasting systems
- Develop and optimize Spark jobs running on EC2 instances, orchestrated via AWS Step Functions for daily batch processing
- Process and validate datasets containing hundreds of millions of loan records for analytics, reporting, forecasting, and downstream business workflows
- Standardized Redshift and Glue table configurations to improve data accessibility and query performance across an S3 data lake
- Monitor Step Function workflows and CloudWatch logs, troubleshooting pipeline failures, data quality issues, and production incidents
- Restructured team Git repository to remove duplicate code, improve version control practices, and reduce manual testing/deployment overhead
- Used GitHub Copilot to support debugging, refactoring, and development of Python/SQL data pipeline code during later-stage project work

Software Developer (Training Program) | Revature

Sep 2020 - Mar 2021 | Remote

- Completed intensive full-stack development program focused on Java, Angular, REST APIs, frontend integration, and enterprise software practices

PROJECTS

Remindr | Kotlin, Android Studio | github.com/kadspace/remindr

- Developing Android productivity app combining calendar and reminder functionality with a focus on clean UX and practical task management
- Used Claude Code and OpenAI Codex as development assistants for Kotlin/Android debugging, refactoring, and feature prototyping
- Exploring AI-powered smart reminder suggestions, including natural-language reminder creation and context-aware task recommendations

EDUCATION

Bachelor of Arts in Computer Science & Mathematics | University of St. Francis

2016 - 2020 | Joliet, IL
