SUMMARY

Data Engineer / Software Developer with 6 years of experience building AWS-based data pipelines and automation for financial services systems. Skilled in Python, SQL, Spark, AWS, and Terraform, with hands-on experience building event-driven serverless systems end to end.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, Kotlin

AWS: Glue, Redshift, S3, Lambda, SQS, DynamoDB, EventBridge, Step Functions, EMR, CloudWatch

Data, Cloud & Tools: Apache Spark, Terraform, Cloudflare Workers, Git, GitLab, Jira, Parquet, Data Modeling

AI Developer Tools: Claude Code, OpenAI Codex, GitHub Copilot, Groq API

EXPERIENCE

Software Developer | Fannie Mae

Mar 2021 - Present | San Diego, CA (Remote)

- Build and maintain data pipelines using Python, SQL, and AWS (Glue, Redshift, S3) for loan calculation and F3 forecasting systems
- Develop and optimize Spark jobs on Amazon EMR, orchestrated with AWS Step Functions for daily batch processing
- Process and validate datasets containing hundreds of millions of loan records for analytics, reporting, forecasting, and downstream business workflows
- Standardized Redshift and Glue table configurations to improve data accessibility and query performance across an S3 data lake
- Monitor Step Function workflows and CloudWatch logs, troubleshooting pipeline failures, data quality issues, and production incidents
- Restructured team Git repository to remove duplicate code, improve version control practices, and reduce manual testing/deployment overhead

Software Developer (Training Program) | Revature

Sep 2020 - Mar 2021 | Remote

- Completed intensive full-stack development program focused on Java, Angular, REST APIs, frontend integration, and enterprise software practices

PROJECTS

aws-ingestion | Python, AWS, Terraform | github.com/kadspace/aws-ingestion

- Built an event-driven telemetry pipeline using EventBridge, Lambda, SQS/DLQ, and DynamoDB, with infrastructure managed in Terraform
- Added idempotent writes, partial batch failure handling, Secrets Manager-backed Discord alerts, and CloudWatch monitoring for resilient ingestion

Remindr | Kotlin Multiplatform, Compose, Groq | github.com/kadspace/remindr

- Built a local-first reminder and note app with recurring schedules, calendar views, and optional Groq-powered natural-language parsing

solovolo | JavaScript, Cloudflare Workers | github.com/kadspace/solovolo

- Deployed a cron-triggered service that tracks Volo Sports listings and notification state, sending filtered Discord alerts when eligible spots appear

EDUCATION

Bachelor of Arts in Computer Science & Mathematics | University of St. Francis

2016 - 2020 | Joliet, IL
